MATHEMATICAL MODELS OF SOCIAL EVOLUTION: A GUIDE FOR THE PERPLEXED BY RICHARD MCELREATH, ROBERT BOYD PDF

Over the last several decades, mathematical models have become central to the study of social evolution, both in biology and the social sciences. But students in these disciplines often seriously lack the tools to understand them. A primer on behavioral modeling that includes both mathematics and evolutionary theory, *Mathematical Models of Social Evolution* aims to make the student and professional researcher in biology and the social sciences fully conversant in the language of the field.

Teaching biological concepts from which models can be developed, Richard McElreath and Robert Boyd introduce readers to many of the typical mathematical tools that are used to analyze evolutionary models and end each chapter with a set of problems that draw upon these techniques. *Mathematical Models of Social Evolution* equips behaviorists and evolutionary biologists with the mathematical knowledge to truly understand the models on which their research depends. Ultimately, McElreath and Boyd's goal is to impart the fundamental concepts that underlie modern biological understandings of the evolution of behavior so that readers will be able to more fully appreciate journal articles and scientific literature, and start building models of their own.

A terrific book

By V. Buffalo

A truly terrific book — fascinating to read, intuitive, and incredibly well-written. The entire book is terrific, but the sections on altruism, reciprocity, and Hamilton's Rule are in my opinion the absolute best material on these subjects out there. Highly recommended.

Social Math? Who Knew.

By Hobson Lane

I revel in these equations at work nearly every day as I watch altruism and greed and fear and dating all around me.

The importance of mathematics for the evolution

By Edoardo Angeloni

The book is an interesting approach for applying the mathematics to the biology.

The mathematical level don't be very difficult, but the approach is global in the sense we can read the more important questions of the evolution theory, from the hawk-dove model to the selection within and between groups.

It is considered also the signal theory and its cost, correlated to the learning.

The mutation is defined as mistake of the evolution.
